Edition - II

“MORE LIGHT,  
GIVE ME MORE LIGHT.”

GOETHE

\*This quote from Goethe has been very meaningful, not just for us, but perhaps for the rest of the world. We always need more lighting in life.

We believe that lighting is not limited to the living space of those who use our products. We aim to enlighten our customers and open up new horizons for those who prefer us. We believe that maybe then we will make our contribution, no matter how small, to the enlightenment that Goethe talks about.

# MORE HISTORY

Our story started in 1996 when we fell in love with light. The family run company which we established to develop products for efficient lighting, expanded in time creating the trade names, Heper and Moonlight. With constant innovations that we bring to the market, Heper Group became an important international player for the outdoor lighting field with business partners in 80 different countries worldwide.

# MORE<sup>L</sup> PERFORMANCE

The world is rapidly changing. We have been developing products which are up-to-date and ready for long lasting operation with the generous helping hand of Bartenbach since many years. Today we are proud of HEPER light laboratory which allows us to test and apply the latest world standards.

**heper**<sup>+</sup>

Full-field Speed Goniophotometer  
International Patented Technologies

# MORE INNOVATION

We ask ourselves the question ‘How should be the lighting of the modern era?’ every day. Respect towards the individual, the society and nature are an inseparable part of our job. Accordingly, we implement the meticulousness in our design, manufacturing and management approaches in each and every one of our processes; because we are designing the future.

## 'LIGHT AND CHARGE' PROJECT

Having been a solution partner in the Light and Charge project developed by eluminocity and co-designed with BMW for electric cars, creating solutions for the world's future brings us one step closer to our goals. As Heper, we achieved the mission: to successfully co-design and manufacture the lighting products in the project.

Light and Charge is a significant step for our future. Heper and eluminocity's engineers developed an extraordinary lighting fixture by working together. The new generation of electric cars will be able to be charged by charge sockets as these lighting fixtures are illuminating the streets.

# MORE<sup>+</sup> QUALITY

Design and technology are the main materials we use in order to achieve higher performance. Thanks to the standard durability tests we perform, we produce long-lasting products resistant to external environmental conditions, physical impacts and chemical factors.

# MORE<sup>+</sup> SOLUTIONS

Thanks to the flexible nature of Heper, we are able to react quickly and create boutique solutions to add value to the architectural details.

We believe that every single Heper product is an engineering marvel with their high technical capacity and efficiency. The brand Heper comprises road, tunnel, landscape and facade lighting products with minimalistic and futuristic designs.

**heper**<sup>+</sup>

Moonlight is easily distinguished with its tailor made look in harmony with the architecture. Our decorative Moonlight brand consists of external lighting products.

**MOONLIGHT**<sup>+</sup>

Alcopole represents the emphasis we put on the world and the environment with its recyclability. Our green brand Alcopole consists of aluminum lighting poles.

**Alcopole**<sup>+</sup>

# MORE CONTROL

In our age, lighting is a systematic solution. It is an important part of our work to control our products accordingly to the needs of the project by making use of lighting control systems which are improving. The products under the brand of HEPER have already been working in a harmony with all modern control systems. Besides, we can find customized solutions and present them which are consistent with different control systems based on the project thanks to our experienced engineers.

- 
- Optional
    - DALI
    - 1-10V
    - AstroDIM
    - StepDIM
    - DynaDIM
  - On Request
    - RF
    - Zigbee
    - GSM / GPRS - Dual Band

# MORE<sup>+</sup> TECHNOLOGY

Our products that are manufactured and created meticulously by our designers are produced using high-tech, high-quality components. Every single feature that our products have, is the product of our perennial research and development efforts. All this is to design and bring the next-generation technologies into our lives.

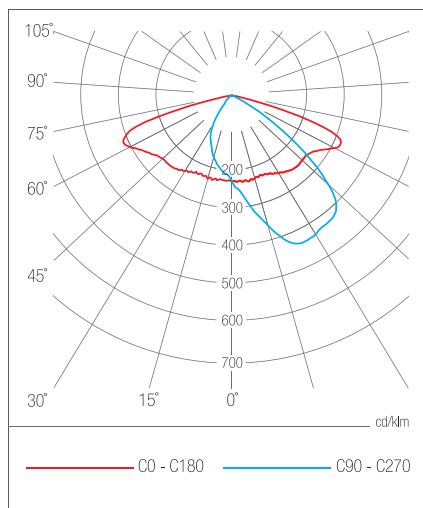

## MILESTONE® - Perfect performance

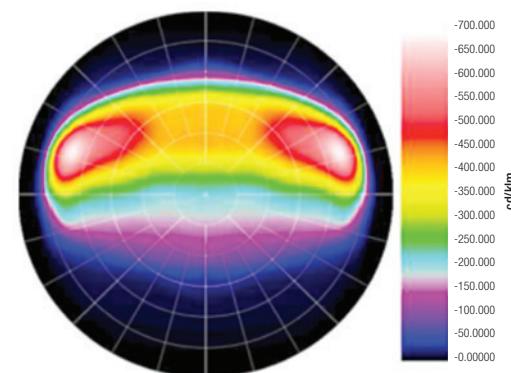

MILESTONE® has a patented unique complex surface reflector technology designed to be used for/in different types of road classification like ME1, ME2, ME3 and ME4 by increasing the number of modules used on fixtures. Modular system also meets specific needs such as street lighting, highway applications and tunnel lighting.

The reflector used inside MILESTONE® has a special coating for higher reflectivity and for a longer lifetime with maximum performance. The module has two kinds of special coating: standard aluminum and optional silver. The Silver coating has a superior feature in terms of high reflectivity, durability and mechanical resistance.

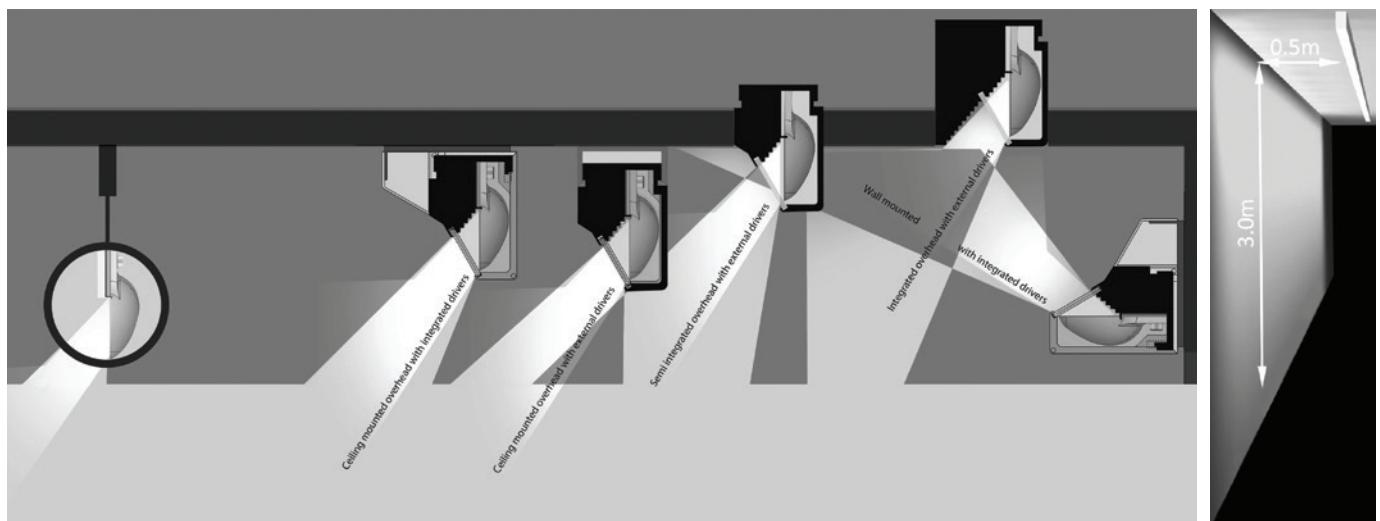

The placement of modules in different numbers and positions provides symmetrical or asymmetrical light distribution. MILESTONE® has a perfect glare control system by using light indirectly with the multifaceted reflector.

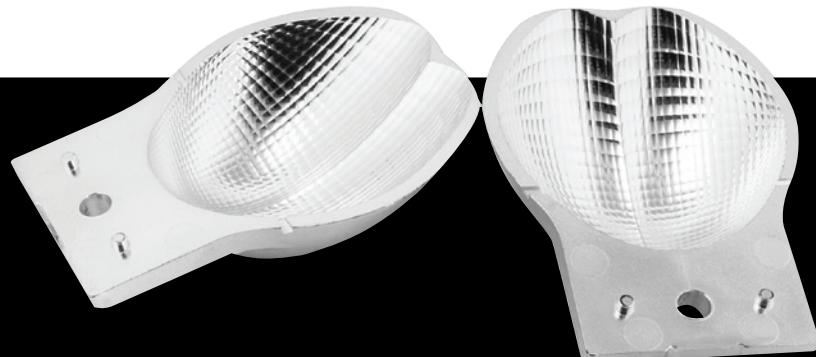

Optimized Road Light Distribution

False Color Rendering

Illuminance distribution on the ceiling and wall with the portion 1/6

## DYNO - Perfect linear form

DYNO LED module; has unique lighting distribution thanks to its complex multifaceted reflector design including longitudinal glare control (optimized cut-off), excellent uniformity with the highest consistency of constant illuminance within defined field.

The lighting distribution of the module is very smooth and in linear form without spot effect. Forward through distribution allows throwing the light 1x distance in the horizontal position and 6x distances in the vertical position.

The light beam is precisely calculated and defined. In order to obtain dynamic white lighting, two different color temperatures from the same light source should be used. Moreover, DYNO is more suitable for UV sensitive environments like historical places, monuments, paintings since it does not emit any UV beams.

Comparison wallwasher with longitudinal glare control DYNO to conventional system.

DYNO - Longitudinal Glare Control

Conventional System

## HYBRID - Perfect beam control

HYBRID is a specially designed optical system which combines the reflector with an additional lens which provides several advantages compared to the classical approach.

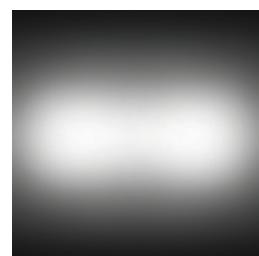

With HYBRID, you can have absolute control over light beam perfect glare control and high efficiency, all combined in one system.

Narrow or medium beam light distribution, increased efficiency by controlling all the light beam and minimized luminance in the cut-off area are just some of the superior features of the Heper's HYBRID system.

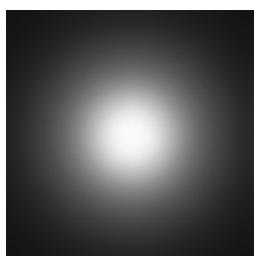

HYBRID products have optional radiation characteristic through the combination of different ancillary lenses. The system is applicable for accented lighting, secondary luminaires, facade illumination and ambient lighting.

0% scattering

0% scattering with secondary coverglass

5% scattering

20% scattering

## FLEXO - Perfect flexibility

We always use the latest technology in order to keep up with the new developments. With our FLEXO products, it's just a matter of an additional lens in order to change the beam angle or Color Temperature (CCT) of the luminaire.

In addition to that, to be able to give the end user a better experience with light, you can choose to use a Honeycomb accessory. No more glare.

## **eluminocity L&C Luminaire\***

Ideal solution for roads and landscape areas

Modular structure with L&C LED module

Luminous flux: from 3400lm up to 16000lm with 1, 2, 3, 4 L&C LED modules

Color temperature: 3000K, 4000K

Optimized road light distribution

Multifaceted micro-reflection system with anti-glare feature

CRI 4000K > 70, 3000K > 80

Optimized PCB-Design with Touchdown technology

Corrosion resistant aluminum housing

Color: Body RAL9006, Details HM1

IP66, IK08

Safety class: standard CLASS I, optional CLASS II

Surge protection (standard): 10kV

Operating temperature: -30°C - +55°C

Complies with European Standards EN 60598, CE, ENEC and UL certified

Control system (optional): 1-10V

L&C Luminaire Large:

Optional: DALI

Optional: RF module or Nema socket for photocell

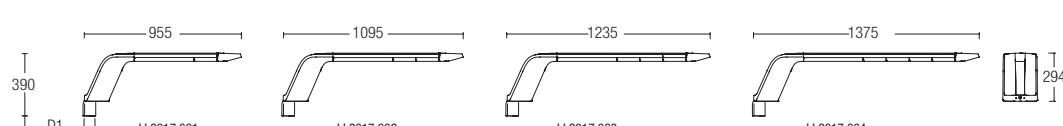

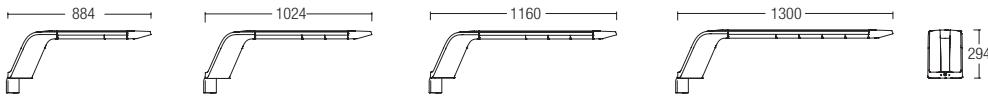

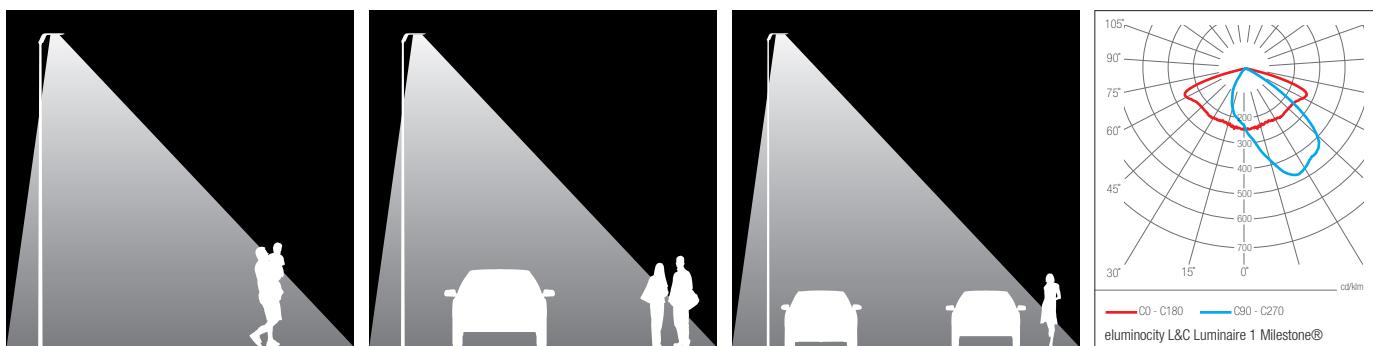

Optional: Special Spigot for US Market

\* Supplied and sold by Heper in specific markets. Please contact us for further informations.

# Tunnel Lighting Principles

## Zone Types

### 1 Access zone

The part of the open road in front of the tunnel portal in the approach direction, covering the distance over which an approaching driver is able to see tunnel entrance. The access zone begins at the stopping distance before the entrance portal and it ends at the tunnel entrance portal.

### 2 Threshold zone

The first part of the tunnel, just after the entrance portal. The threshold zone starts either at the beginning of the tunnel or at the beginning of the daylight sunscreens when occurring. The length of the threshold zone is at least equal to the stopping distance.

### 3 Transition zone

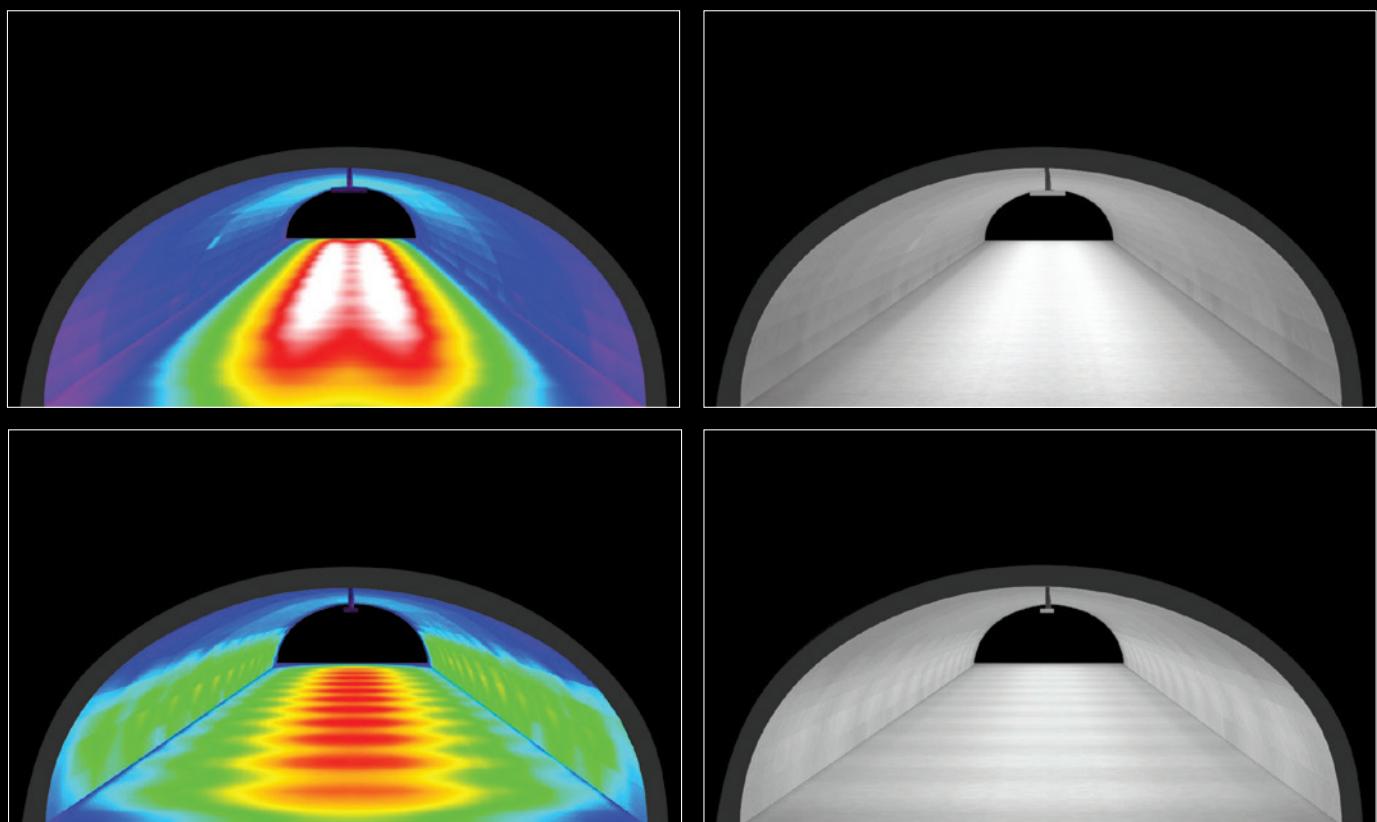

The part of the tunnel starts from just after the threshold zone and ends at the beginning of interior zone. The lighting level in the transition zone is decreasing from the level at the end of the threshold zone to the level of the interior zone. Interior zone: the part of the tunnel after the transition zone till to the beginning of the exit zone.

### 4 Interior zone

The part of the tunnel after the transition zone till to the beginning of the exit zone.

### 5 Exit zone

The exit zone begins at the end of the interior zone, ends at the exit portal of the tunnel.

# Design Criterias

## **Design speed**

The design speed is the speed for which the tunnel is laid out. It is generally accepted that this speed is the maximum speed allowed on the access roads to the tunnel.

## **Reference point**

The reference point is in principle the point located in the centre of the approaching lanes, at a height of 1,5 m and at a distance from the entrance of the tunnel equal to the stopping distance (SD) at the design speed.

## **Stopping distance**

Stopping distance is the distance necessary to stop the vehicle moving at the speed in question in total safety. It comprises the distance covered during the reaction time and during the braking time.

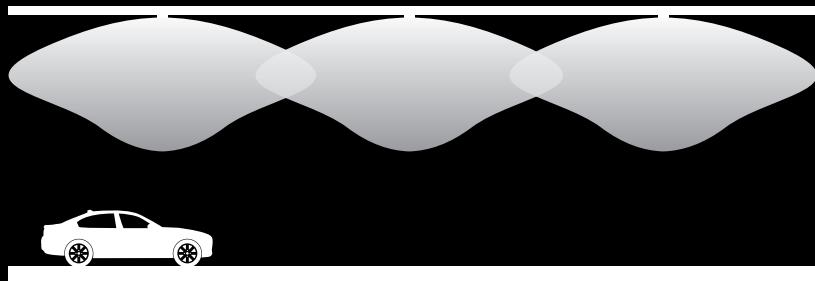

## **Tunnel**

Tunnel is the structure over a roadway that restricts the normal daytime natural illumination of a roadway section such that the driver's visual sensation is diminished. In order to classify changing lighting requirements along with the tunnel length, tunnel is evaluated in the form of sub interior zones: the access zone, the threshold zone, the transition zone, the interior zone, the exit zone and parting zone.

## **Traffic flow**

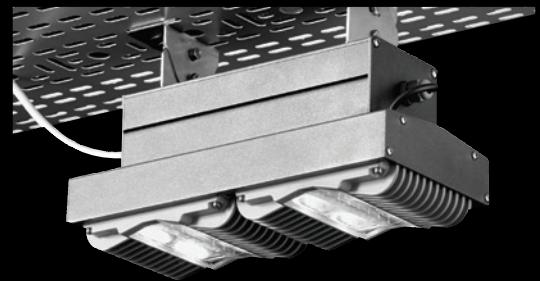

The number of vehicles passing a specific point in a stated time in stated direction(s). In tunnel design, peak hour traffic, vehicles per hour per lane, will be used.

# Light Distributions

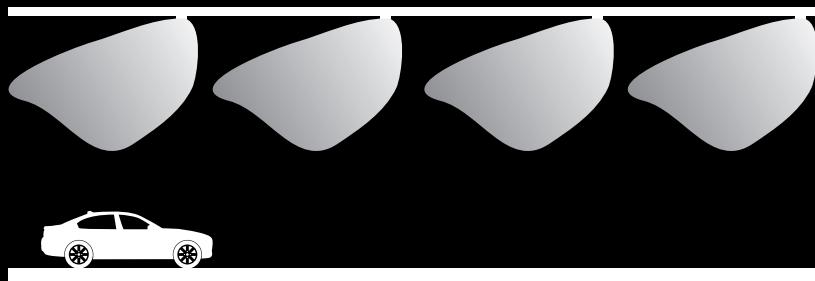

## Symmetric lighting

The lighting where the light equally falls on objects in directions with and against the traffic. Symmetric lighting is characterized by using luminaires that show a luminous intensity distribution that is symmetric in relation to the plane normal to the direction of the traffic.

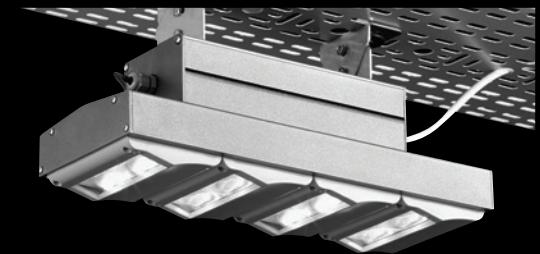

Milestone® Symmetrical Light Distribution

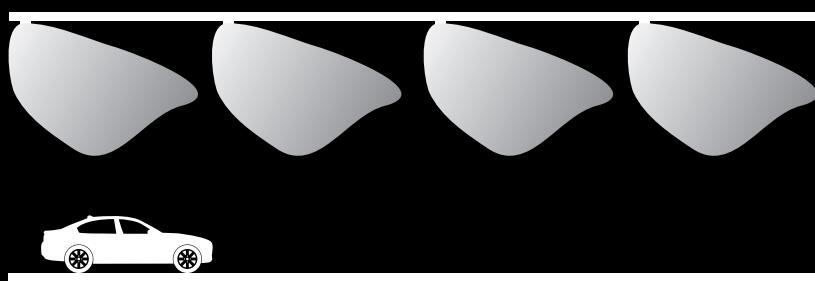

## Counter-beam lighting

The lighting where the light falls on objects from an opposite direction to the traffic. Counter-beam lighting is characterized by using luminaires that show a luminous intensity distribution that is asymmetric in relation to the plane normal to the direction of the traffic, where the maximum luminous intensity is aimed against the direction of the traffic. The term refers only to the direction of normal travel.

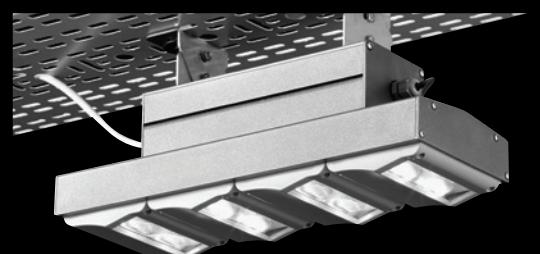

Milestone® Counter-beam Light Distribution

## Pro-beam lighting

The lighting where the light falls on objects in the same direction as the traffic. Pro-beam lighting is characterized by using luminaires that show a luminous intensity distribution that is asymmetric in relation to the 90/270 C-plane (the plane normal to the direction of the traffic), where the maximum luminous intensity is aimed in the same direction as the direction of the traffic.

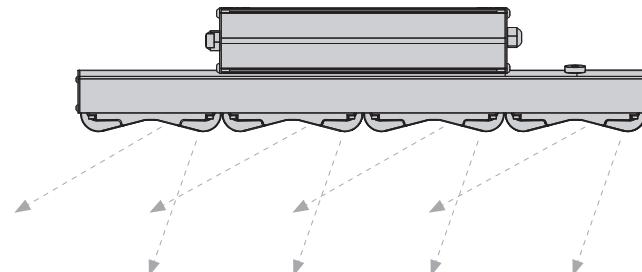

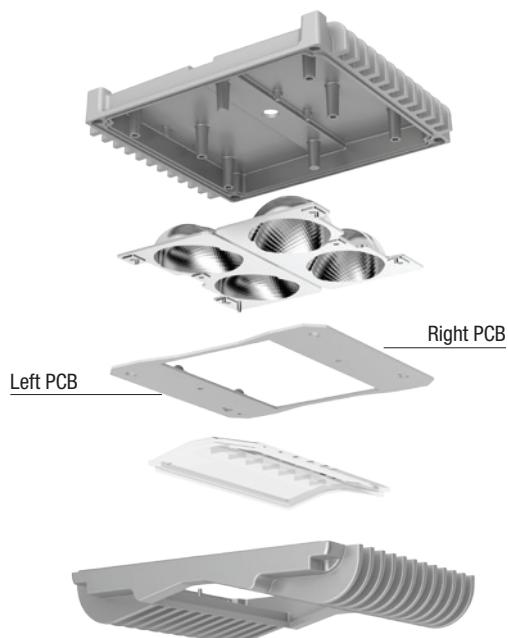

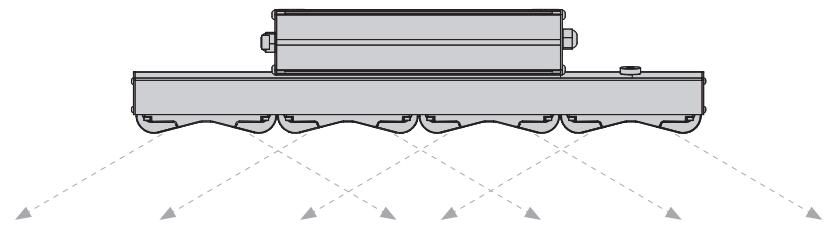

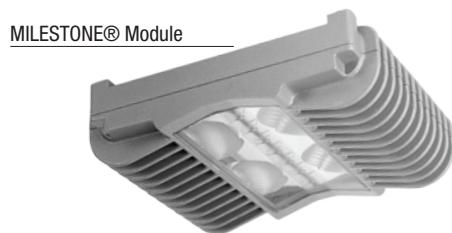

Milestone® Pro-beam Light Distribution

# Adaptive Lighting

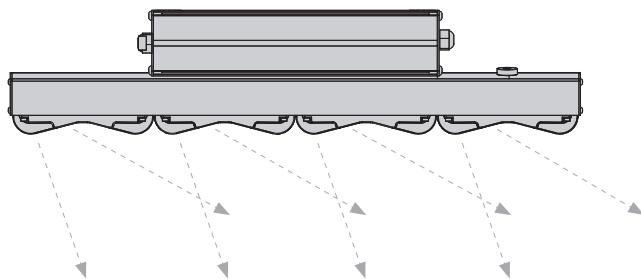

Depending of the design criterias, you would need different light distributions along the tunnel such as Pro-beam, Counter-beam or Symmetrical. Especially in "Transition zone", there is common use of Symmetrical light distribution where the driver would need to see any objects within the stopping distance. In principle, stopping distance is calculated according to traffic flow. But traffic flow is not constant in general, it means there are different times of the day where you'll see high or low traffic.

There are several researches that proves main reason for the accidents in tunnel is not related to seeing any object but the car next to us. When the traffic flow is higher than expected, to be able to see the next car, Pro-beam lighting would be sufficient and even visually more comfortable as the light will only be directed in front of the driver.

This is where the T-Light concept comes along. T-Light is the only luminaire in the world that has electronically switchable optical units providing Pro-beam, Counter-beam and Symmetrical light distribution. Thanks to the patented Milestone® technology of Heper, it's possible to control separately two PCB's within the Milestone® module. With a careful planning, it would be possible to have an intelligent approach to the tunnel lighting design. When there is high traffic flow, system can change to Pro-beam light distribution automatically. This means more visual comfort, less accidents.

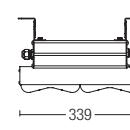

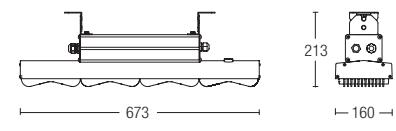

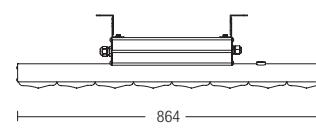

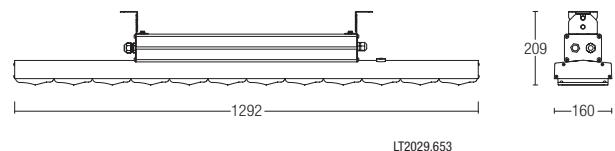

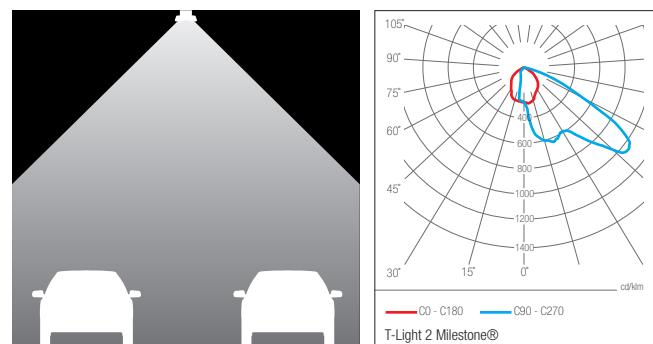

**Counter-beam light distribution with right PCB on and left PCB off.**

**Pro-beam light distribution with right PCB off and left PCB on.**

Ideal solution for roads and landscape areas

Modular structure with Heper's patented Milestone® LED module

Luminous flux: from 6800lm up to 16000lm with 2 and 4 Milestone® LED modules

Color temperature: 3000K, 4000K

Optimized road light distribution

Multifaceted micro-reflection system with anti-glare feature

CRI 4000K > 70, 3000K > 80

Optimized PCB Design; aluminum PCB or FR-4 PCB with touchdown technology

Corrosion resistant aluminum housing

Electrostatic powder coating

Color: standard HM1 to HM5, optional RAL codes

IP66, IK08

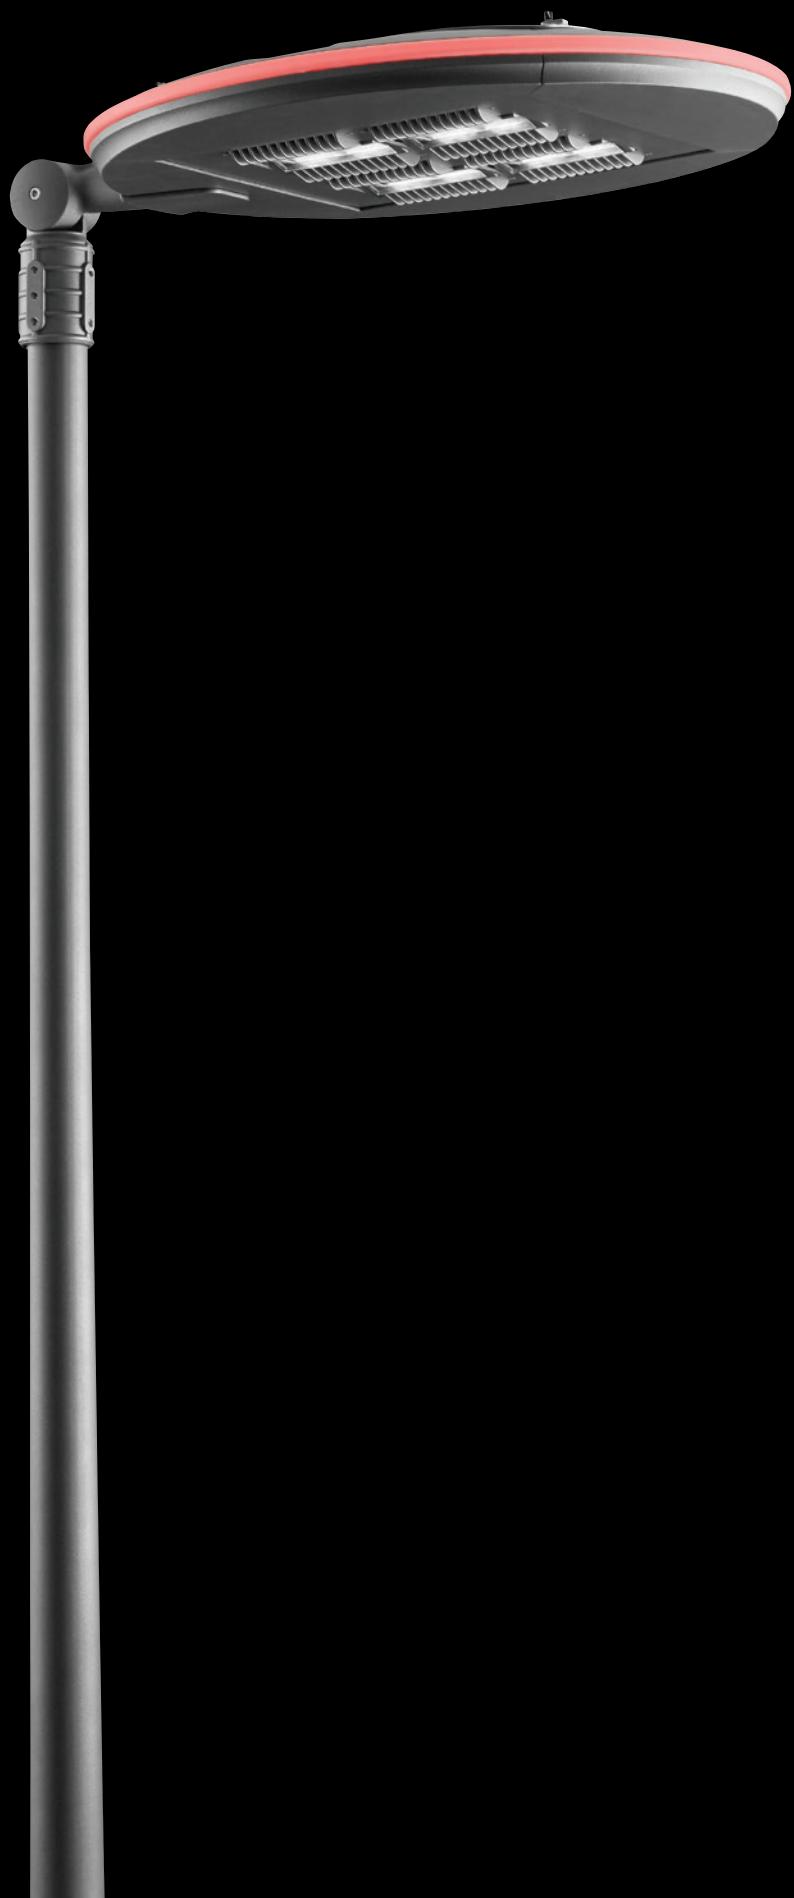

Safety class: CLASS I

Control system (optional): 1-10V, DALI, DynaDIM, AstroDIM

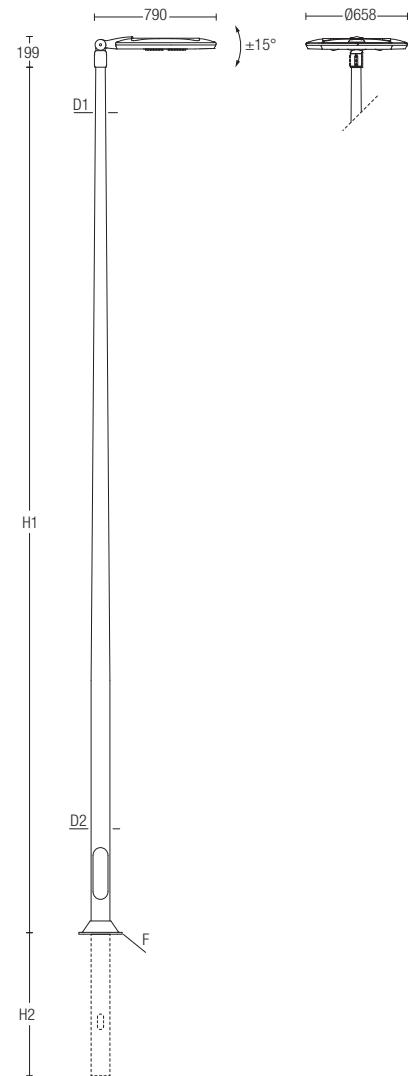

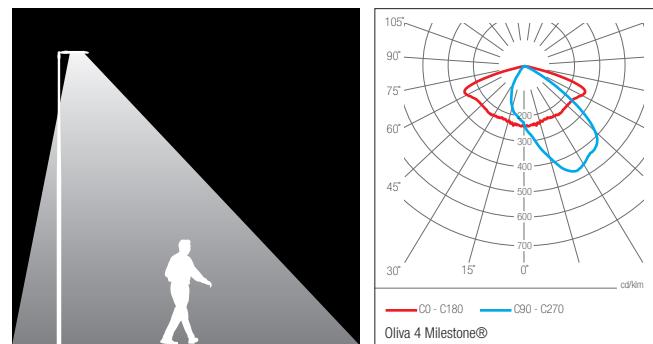

Adjustable bracket tilt angle between  $\pm 15^\circ$

Operating temperature: -30°C - +55°C

Complies with European Standards EN 60598 and CE certified

# Norma

Ideal solution for landscape areas

Structured with LED light source

Luminous flux: from 100lm up to 2800lm

Color temperature: 3000K, 4000K

Symmetrical optimized light distribution

Flexo CRI > 95

CRI 4000K > 70, 3000K > 80

Corrosion resistant aluminum housing

Electrostatic powder coating

Color: standard HM1 to HM5, optional RAL codes

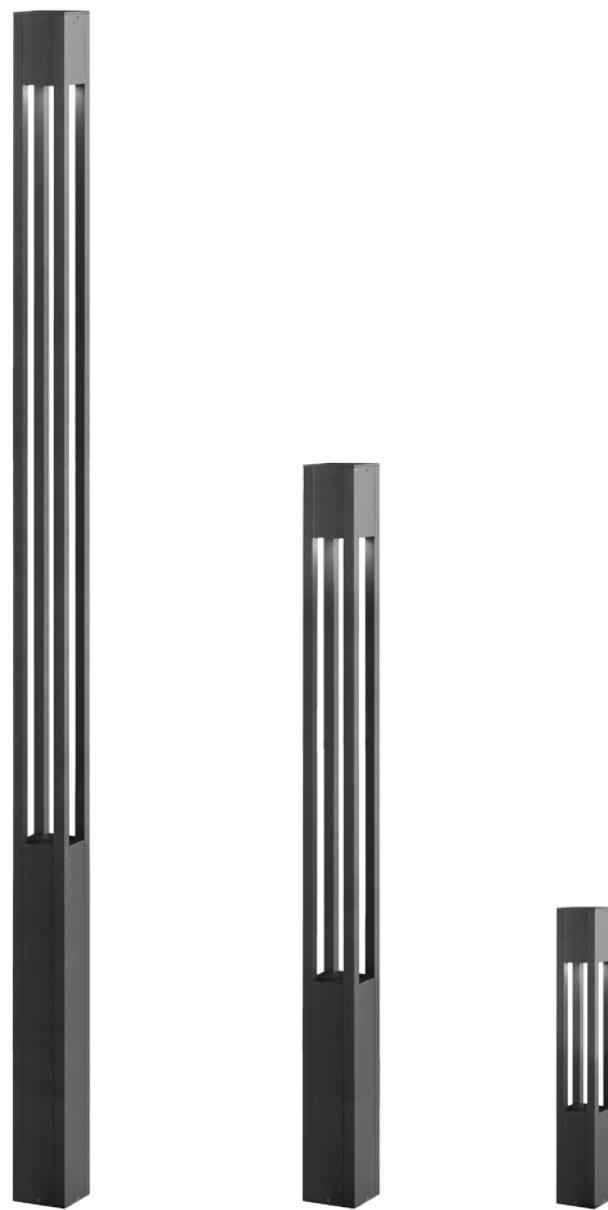

IP65, IK07

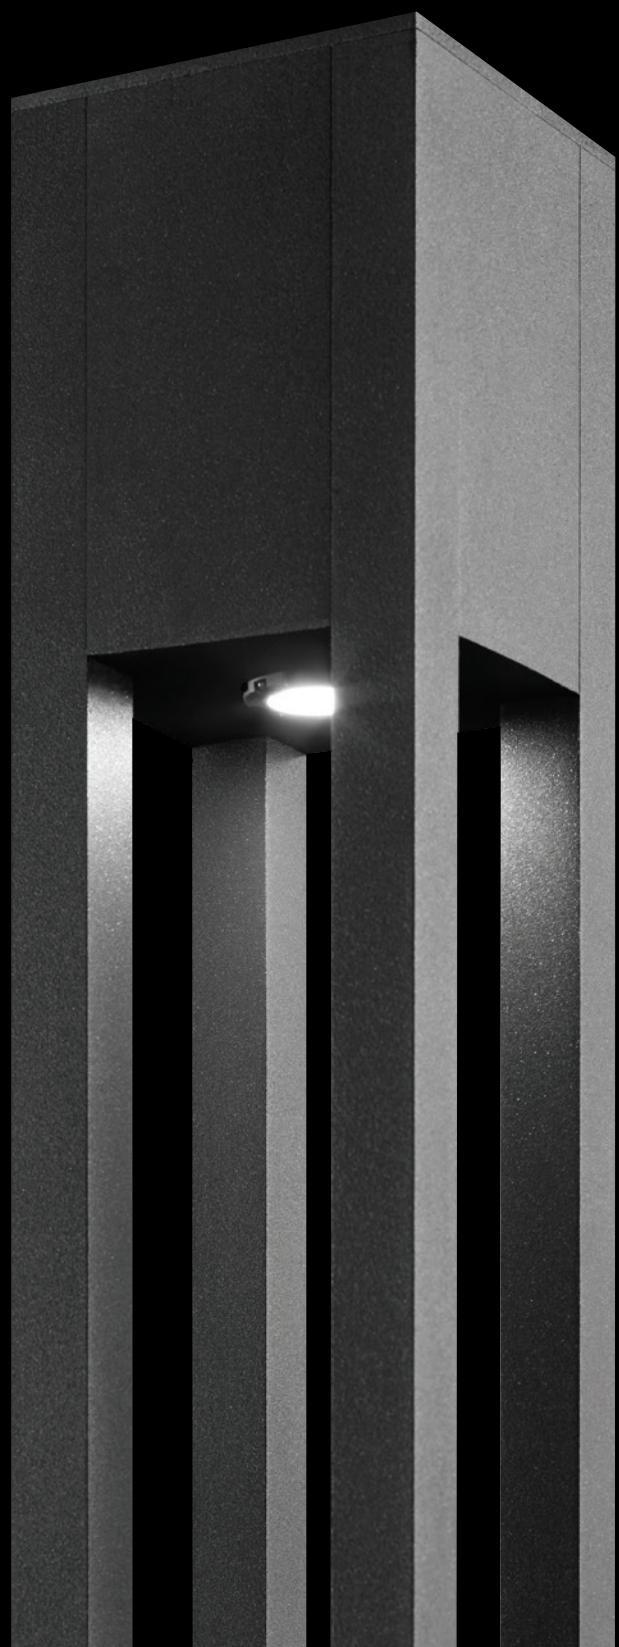

Safety class: CLASS I

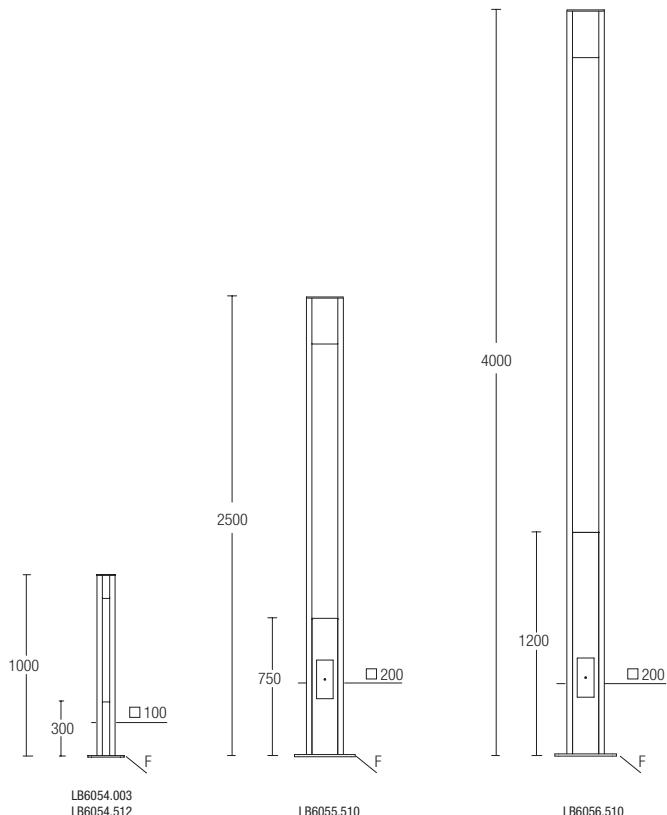

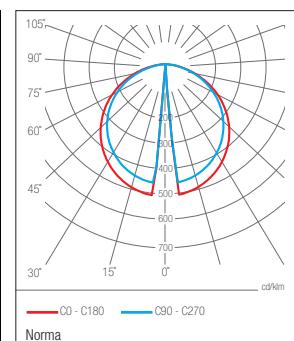

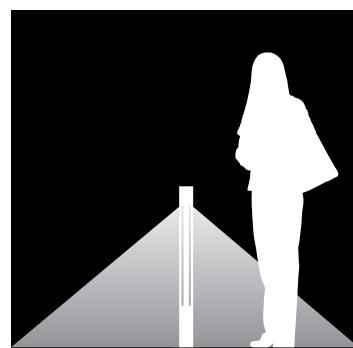

Control system (optional): 1-10V, DALI

Operating temperature: -30°C - +55°C

Complies with European Standards EN 60598 and CE certified

# MORE EXPERIENCE

Providing lighting for the most prestigious buildings of the world was an ambitious objective for us. We haven't just succeeded in meeting these objectives; we've also created lighting systems that add value to unique buildings. We've succeeded to keep the high-quality standards of Heper throughout changing countries, climates and architectures.

# MORE NETWORK

Heper is in every corner of the world with its everlasting quality, unique designs and innovative solutions. Exporting to 80+ countries in; Europe, Balkans, North Africa, America, Middle East, Russia, Australia, New Zealand.

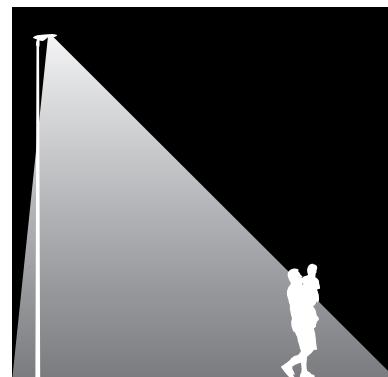

# CATALOGUE GUIDE

<b>LUMINAIRE</b>	<b>DESCRIPTION</b> These are product descriptions and versions.	<b>LUMEN</b> Given lumen values in the catalogue are standard lumen values.
<hr/>		
<b>CODE</b> These are product codes.	<b>POWER</b> Given watt values in the catalogue are standard power values.	<b>COLOR TEMPERATURE</b> Given color temperature values in the catalogue are standard color temperature values.
<b>CE</b>	Luminaire in compliance with governing European directives.	
	Certification indicates conformity with the relevant European standards on safety and functionality.	
	Certification indicates conformity with the relevant Russian federation standards on safety and functionality.	
	Certification indicates conformity with the relevant North America standards on safety and functionality.	
<b>IKxx</b>	Mechanical impact strength classification.	
<b>IPxx</b>	Ingress protection classification.	
<b>L</b>	L refers to the large version of the product.	
<b>S</b>	S refers to the small version of the product.	

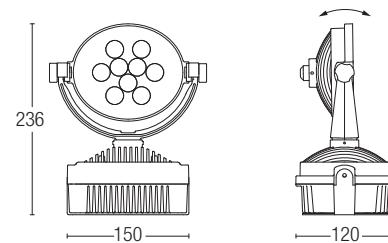

### Photometric Diagram

The photometric polar diagram is to provide a general idea about the light distribution of dedicated particular Luminaires. The diagram is shown in C plane quadrants.

### Reflection & Proportion

The figure to indicate a basic light forwarding direction to help designers to select suitable luminaire for specific application.

### Technical Drawing

Technical drawings inclusive of basic dimensioning are given to assist designer checking dimensional suitability.
